

Shivang Saxena

Senior Full Stack Engineer with 5+ years building Distributed AI Orchestration and Low-Latency Systems at scale. Expert in Node.js and Go, specializing in Multi-Agent workflows, RAG, Vector Search, and Fintech platforms.

Experience

BATTERYSMART | SDE III - Full Stack

Sep 2024 – Nov 2024

- Rapidly delivered **5+ production features** across internal admin portals and customer-facing web applications using **Node.js** and **React**, improving operational efficiency and user experience for battery logistics operations.

MOOL | SDE III - Full Stack

Dec 2022 – Aug 2024

- Architected distributed backend serving **5K+ concurrent users** with **2M+ API requests/day** across 5 Node.js microservices, achieving **99.9% uptime** and **<100ms P95 latency** through optimized gRPC communication and Redis caching.
- Built production **RAG pipeline** indexing **10M+ financial documents** with **<200ms semantic search** using Pinecone/Weaviate vector databases, powering **50K+ monthly analyst queries** and replacing hours-long manual research with seconds.
- Engineered **Multi-Agent Orchestration** system processing **100K+ tool invocations/day** with distributed session state (Redis), context retention across **20+ concurrent conversations**, and intelligent workflow routing—completely replacing legacy UI-based investment analysis.
- Delivered real-time **Voice AI** with **<300ms end-to-end latency** (STT→LLM→TTS) over WebSocket, supporting **1K+ concurrent voice sessions** at **99.5% uptime** with human-like responsiveness through stream optimization.
- Integrated **Financial Account Aggregators** processing **\$10M+ monthly transactions** across **50+ institutions** with PCI-DSS compliant payment gateways, implementing multi-tenant RBAC for **10K+ users** with zero PII breaches.
- Reduced cloud infrastructure costs by **80% (\$50K→\$10K/month)** through Kubernetes spot instance orchestration, containerization, and autoscaling policies for high-throughput GPU workloads.
- Owned end-to-end **Admin Portal** serving **100+ enterprise clients**, handling user lifecycle, billing (**\$500K+ ARR**), and system observability (DataDog/Prometheus) as the operational backbone of the SaaS platform.
- Migrated monolith to event-driven microservices (Kafka, **10K events/sec**), improving deployment frequency **10x** and reducing P95 API latency from **2s** to **<100ms** with circuit breakers and distributed tracing.

DEQCODE LABS | Senior R&D Engineer

Oct 2022 – Nov 2022

- Led 5-engineer team delivering **Blockchain analytics platform** processing **100K+ transactions/sec** with **<50ms query latency**, generating **\$500K ARR** through enterprise Spiking dashboards and real-time insights.
- Architected secure distributed ledger applications with Byzantine fault tolerance, ensuring data immutability and consensus across **10+ validator nodes** with **99.95% uptime**.

Skills

BACKEND & LANGUAGES

Node.js (NestJS) • **Golang** • JavaScript/TypeScript • SQL • C++ • Python

AI & DATA

LLM Orchestration • **RAG Pipelines** • **Vector Databases** • LangChain • Semantic Search

ARCHITECTURE

Microservices • **gRPC** • **Event-Driven** • Kafka • WebSockets • GraphQL

DATABASES

PostgreSQL • MongoDB • Redis • ClickHouse • Vector Stores

INFRASTRUCTURE

AWS • **GCP** • **Kubernetes** • Docker • Terraform • CI/CD (Jenkins)

Coursework

SYSTEM DESIGN

Data Structures, Algorithms, and Distributed Systems at Scaler Academy (2019–2021).

Awards

Winner, Smart India Hackathon (2019), IIT BHU
Core Member, GDSC LNCT Bhopal

Scaler: [shivang-saxena](#)

Education

BE (CSE) | LNCT Bhopal
2017 – 2020 | CGPA: 7.86

DIPLOMA (CSE) | Govt. Polytechnic
2013 – 2016 | 74.04%

R&D Engineer

Mar 2021 – Sep 2022

- Architected **SimplyNFT** marketplace handling **\$2M+ NFT transactions** and **10K+ users** using NestJS + Ethereum smart contracts (Solidity), achieving **99.8% uptime** with secure MetaMask wallet integration and gas optimization.
- Built real-time **Blockchain Analytics** for Spiking processing **1M+ events/day** via event-driven architecture (Kafka), enabling sub-second insights on **500+ crypto assets** with **<100ms dashboard refresh**.
- Productionized open-source BI tools (Metabase, ToolJet) for **20+ enterprise clients**, achieving **99.7% SLA** through custom caching, query optimization, and high-availability PostgreSQL replication.

APPOINTY INC | Software Engineer

Oct 2020 – Mar 2021

- Engineered high-concurrency microservices for MatterSuite serving **50K+ legal professionals** with **99.9% SLA**, achieving **25% workflow efficiency gains** by migrating monolith to event-driven Go services (gRPC, Pub/Sub).
- Optimized distributed case management system handling **100K+ documents/day** through PostgreSQL partitioning, connection pooling, and read replicas, reducing query latency by **60%** (500ms→200ms).

Product Developer Intern

Feb 2020 – Sep 2020

- Built domain-driven microservices using **Go**, **gRPC**, and **PostgreSQL**, supporting **10K+ concurrent connections** with connection pooling and context-aware timeouts.
- Developed internal CLI tooling automating deployment workflows, reducing release time by **40%** and eliminating manual configuration errors through secure secret management.
